

Tee's House — Developer Setup Guide

Getting the Project Running on a New Machine

Step 1 — Install Prerequisites

On Tierra's machine, install these if not already there:

- **Node.js** (v18+): <https://nodejs.org> → download LTS
- **Git**: <https://git-scm.com/download/win>
- **VS Code** (optional but recommended): <https://code.visualstudio.com>

Verify they installed — open Terminal and run:

```
node -v
git -v
```

Step 2 — Clone Both Repos

```
git clone https://github.com/teeshouse/teessite.git
git clone https://github.com/minher1/teeshouse-studio.git
```

Step 3 — Set Up the Site (.env.local)

```
cd teessite
cp .env.example .env.local
```

Then open `.env.local` in VS Code and fill in every value. Copy them from Mike's `.env.local` at:

```
C:\Users\MikeArbrouet\Documents\teessite\.env.local
```

Step 4 — Install Dependencies

```
# In teessite/
npm install

# In teeshouse-studio/
cd ../teeshouse-studio
npm install
```

Step 5 — Test Locally (Optional)

```
# Run the site
cd teessite
npm run dev
```

```
# Opens at http://localhost:3000

# Run the studio
cd teeshouse-studio
npm run dev
# Opens at http://localhost:3333
```

Step 6 — Connect Git to Her GitHub Account

```
git config --global user.name "Tierra Arbrouet"
git config --global user.email "tierra@teeshouse.org"
```

When she pushes for the first time, GitHub will ask her to log in — she uses her GitHub credentials.

Step 7 — Verify Vercel Is Linked

1. Log into **vercel.com** with her account
 2. Confirm the `teessite` project is there and auto-deploy is on for the `main` branch
 3. Go to **Settings** → **Environment Variables** and make sure all the same variables from `.env.local` are added there too (Vercel needs its own copy)
-

Step 8 — Set Up Sanity Webhook (One-Time)

So the site updates instantly when she publishes in Sanity:

1. Go to **sanity.io/manage** → project `zbeb0ctt` → **API** → **Webhooks**
2. Click **Add Webhook**
3. URL:

```
https://teeshouse.org/api/revalidate?
secret=03b1e5cc82e515d76a8fb99ca238891e88932935275041e7a7b77b31f440d8f9
```

4. Trigger: **On publish**
 5. Save
-

Step 9 — Deploy the Studio (One-Time)

To push the latest sidebar changes (Community Impact, Products & Services, etc.) live:

```
cd teeshouse-studio
npx sanity deploy
```

When prompted for hostname, type: **teeshouse**

Day-to-Day Workflow After Setup

To update site content (no code needed):

Log into <https://teeshouse.sanity.studio> — make changes and publish.

To make code changes:

```
# Make changes in VS Code, then:
git add .
git commit -m "describe what you changed"
git push origin main
# Vercel auto-deploys in about 2 minutes
```

To update the Studio (schema/sidebar changes):

```
cd teeshouse-studio
git add .
git commit -m "describe schema change"
git push origin main
npx sanity deploy
```

Quick Reference

What	Where
Live site	https://teeshouse.org
Sanity Studio	https://teeshouse.sanity.studio
Vercel dashboard	https://vercel.com
Supabase dashboard	https://supabase.com
Site GitHub repo	https://github.com/teeshouse/teessite
Studio GitHub repo	https://github.com/minher1/teeshouse-studio
